Data Analysis as a Career: Skills, Roles, Paths, and Salaries

https://www.linkedin.com/in/mk-analytics

Manoj Kumar

Introduction

Hey, are you into data and finding insights from it? If you are, you might want to think about becoming a data analyst.
Data analysts are the ones who make sense of the data we collect and use for decision making, reporting, visualization, and more.
They deal with various types of data, using different tools and techniques to clean, transform, explore, and analyze data. Data analysis is a super important and fun part of data science.

Manoj Kumar

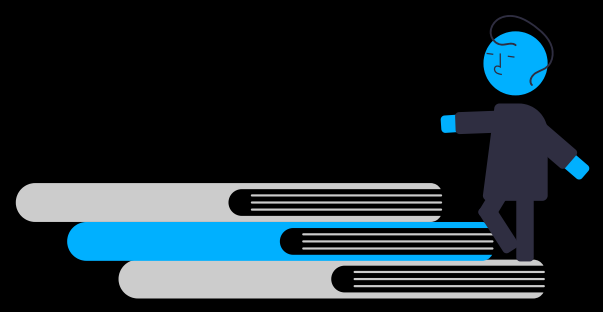
Skills and Qualification

Here are the main skills you need to be a Data Analyst:

- Programming languages for manipulating, processing, and analyzing data such as Python, R, SQL, etc.

- Tools and libraries to work with data and create visualizations such as Excel, Tableau, Power BI, pandas, matplotlib, ggplot2, etc.

- Statistics and mathematics to understand and apply different methods and models such as descriptive statistics, inferential statistics, probability theory, linear algebra, etc.



Manoj Kumar

Career path

As a data analyst, you can choose different career paths and levels. Some of them are:

- Junior data analyst: You will learn the basics of data analysis and do simple tasks like cleaning and exploring data.
- Senior data analyst: You will perform complex data analysis and create reports and dashboards for different stakeholders.
- Lead data analyst: You will lead a team of data analysts and manage the data analysis process and strategy
- Data analysis manager: You will lead multiple teams of data analysts and coordinate their work across different projects and domains.

Manoj Kumar
