5 STEPS

GOING FROM

SMALL

TO

BIG DATA

Paul Macey

THIS GUIDE IS FOR YOU IF...

- You work with data
- You're bored with spreadsheets, databases, and reports
- You feel left behind not knowing about big data or using cloud data services
- You need the first steps to break free & grow your data career

Resources are at the end

1. SMALL VS BIG

Small data

- can be a size that works on your **laptop** or **server** usually a spreadsheet or database
- is usually in **rows** and **columns** like a **text file** or **spreadsheet**

Big Data

- is made up of **different data structures**
- can arrive at different **speeds** & **sizes**
- is usually done in the **cloud**
- **complex functions** & **calculations** can be done on the data

2. YOU ALREADY KNOW STUFF

Data prep is still data prep

You can use you existing skills to :

- clean
- transform
- remove duplicates
- fill in missing values
- standardize data formats

You still need to query & analyse

- Calculations are still functions or SQL

3. ZOOM OUT

Get a high level view of cloud

Understand

- What cloud is
- Who does cloud
  - Amazon
  - Google
  - Microsoft etc
- What data services each offer

Choose only **1** cloud provider to be your go to

4. ZOOM IN

Pick an existing data task you've already solved

- you know the logic, data prep, & result
- replicate it in the cloud

For the cloud provider pick only 1 cloud service for :

- Storage
- Data preparation
- Analysis / Insights / ML

Go and build

5. YOU'RE NOT ALONE

- Loads of online courses and content
- Lots of examples from cloud providers
- Online forums, blogs, and social media to have your questions answered
- You can message me about cloud data services, learning pathways, and mentorships

YOU'VE GOT THIS

- You don't have to start at the beginning
- Use the knowledge you already have and add to it
